

City Park Area Satellite Maintenance Building

What are satellite maintenance buildings?

Parks has constructed several satellite maintenance buildings in strategically located parks throughout the city including Lakewood, Peter Zakreski, Hampton Village, Hyde and Evergreen Parks. These buildings are intended to improve customer service and the coordination of park maintenance, as well as provide storage for the equipment necessary to maintain park areas.

Why are satellite maintenance buildings necessary?

Satellite maintenance buildings are necessary because:

- current maintenance facilities are at capacity.
- they allow for more efficient localized maintenance operations.
- they increase staff safety by limiting travel.
- they improve employee accountability, awareness and sense of “ownership”.

City Park Area Satellite Maintenance Building

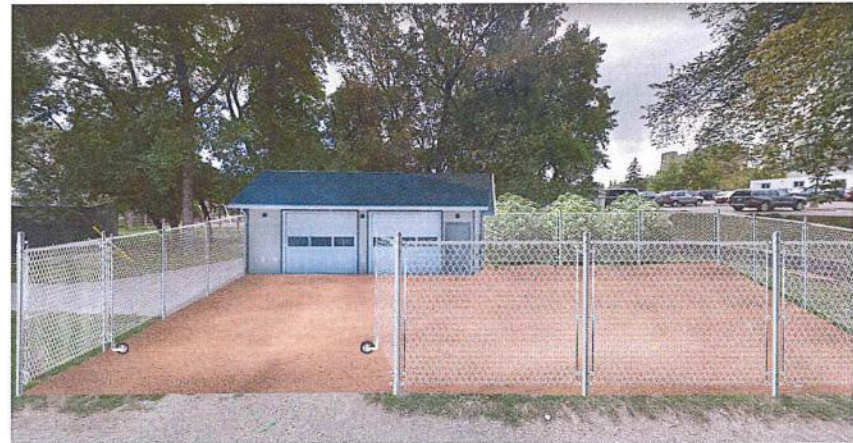

In 2019, a new satellite maintenance building will be constructed in the City Park area. Two locations are being proposed.

Location Option A: Kinsmen Park

West end of park off the 5th Avenue alley.
